

Risk Management

Evaluate risks and process them systematically

Your benefits

- ✓ Use a comprehensive risk analysis to keep the effects (e.g. market, legal and financial risks) of individual risks and the sum of all risks as low as possible.
- ✓ By dealing intensively with process structures, you create more transparency on a product, project and company-wide level.
- ✓ In addition to risks, you also recognize opportunities and chances for improvement, after your workflows were systematically analyzed.
- ✓ Benefit from improved planning reliability and avoid resource bottlenecks.
- ✓ You comply with industry-specific legal requirements, e.g. in the banking or insurance sector.

Risk assessment cycle

With the OMNITRACKER Risk Management, you gather, evaluate, control and document all risks on process, project and company level. After a systematic analysis of the probability of occurrence and potential impact, a prioritization takes place. Once a suitable risk strategy has been determined, an individual catalog of measures is defined to deal with each individual risk appropriately.

This complex overall process requires a division into sub-processes that can be standardized and easily implemented. The individual steps are performed reliably by the risk management software. Automated workflows ensure that regular analyses, evaluations, monitoring and implementation of all action steps are performed reliably.

Features of the OMNITRACKER Risk Management

Simple customizing
(incl. individual permissions
and role concepts)

Risk management through
actions, plans and programs

DIN ISO

Support of the risk management
requirements of ISO 31000
